

## IMCO Technologies Anti-Virus Software Policy

Document 4038 Revision B

---

Implementation, support, and maintenance of anti-virus/malware software are the customer's responsibility. IMCO Technologies strongly advises you, our valued customer, to install anti-virus/malware software on your IMCO system. This software will likely require periodic updates to help block new virus threats. These software updates are the sole responsibility of the customer.

IMCO Technologies experience has demonstrated that the risk of properly configured anti-virus software interfering with system performance is extremely low. Anti-virus software is available as an enterprise solution or can be applied to individual components. Such applications will allow your institution to rapidly respond to new threats, including fast spreading Internet viruses and worms.

Based on IMCO Technologies primary concern – preventing a virus attack of your system – we strongly recommend that all updates to the virus definition files and/or software upgrades be performed by the customer, to include the annual renewal fees for any anti-virus/malware software.

IMCO Technologies has, and will continue to, work with its customers in an attempt to minimize and preemptively address anti-virus issues. If you have questions related to product compatibility or anti-virus/malware applications, please contact IMCO Technologies Customer Support at (800) 300-7734.
